

CLAIMS

1. A collection method which provides a screen for a logged-in user and allows the user to specify collection
5 of used goods according to said screen,
characterized in that said screen contains:
an item for receiving orders for the goods from said
user; and
an item for said user to specify whether to use
10 collection of the used goods.
2. The collection method according to Claim 1,
characterized in that said screen contains data which
indicates the progress of collection of used goods in the
15 case of the user who has specified said collection.
3. The collection method according to Claim 1,
characterized in that used goods are collected when
ordered goods are delivered, if said collection is
20 specified.
4. The collection method according to Claim 1,
characterized in that an Internet is used for said
log-in.
- 25
5. A sales system which comprises: log-in means for making
a user who intends to order goods log-in; supply means for

supplying an ordering screen for the logged-in user; and a reception means for receiving order information which is based on said ordering screen,

characterized in that said supply means supplies said
5 user an ordering screen which contains an item for said user to specify whether to use collection of used goods.

6. The sales system according to Claim 5,

characterized in that said supply means includes data
10 that indicate the progress of collection of used goods in said ordering screen in the case of a user who has specified said collection.

7. The sales system according to Claim 5, characterized
15 in that said user accesses said sales system via an Internet.

8. A program for implementing a sales system which makes
a user who intends to order goods log-in, supplies an
20 ordering screen for the logged-in user, and receives order information which is based on said ordering screen,

characterized in that said program comprises a step
of supplying said user an ordering screen which contains
an item for said user to specify whether to use collection
25 of used goods.

0975980-0001

9. A medium containing program code of a sales system which makes a user who intends to order goods log-in, supplies an ordering screen for the logged-in user, and receives order information which is based on said ordering
5 screen,

characterized in that said program code comprises at least code for a step of supplying said user an ordering screen which contains an item for said user to specify whether to use collection of used goods.
10

10. An ordering method for logging-in to a designated server and ordering desired goods according to an ordering screen provided by said server,

characterized in that said ordering screen contains
15 a list of goods compatible with equipment used by an orderer.

11. The ordering method according to Claim 10,
characterized in that said ordering screen further
20 contains price information corresponding to the listed goods and said orderer.

12. The ordering method according to Claim 11,
characterized in that said ordering screen is
25 generated based on databases which record at least the orderer, equipment used by the orderer, goods compatible
